

# AYUSH JAISWAL

Full-Stack & AI Developer | CSE Undergraduate

## • CONTACT

- +91 90262 22495
- ayushjaiswal1204@gmail.com
- Bangalore, India
- github.com/Ayushjaiswal001

## • SKILLS

- JavaScript / TypeScript • React & Next.js
- Node.js & Express • Python
- Convex (real-time backend) • REST APIs & JWT Auth
- SQL / SQLite • Git & GitHub
- Testing: Vitest, Playwright, pytest • LLM APIs & Prompt Engineering • Data Structures & Algorithms
- Web Security basics

## • LANGUAGES

- English—Fluent
- Hindi—Native

## • PROFILE

Second-year CSE undergraduate and project-driven builder who ships full-stack web apps with Next.js, React, and Node.js plus AI/automation tooling. Comfortable across the stack— real-time backends, REST APIs, billing, auth, and web-security basics— with hands-on testing (Vitest, Playwright, pytest) and a solid DSA/OOP foundation. Seeking a software engineering internship.

## • PROJECTS

### StatusMirror— Service-Outage Monitoring SaaS

[GitHub ↗](#)

Tech: Next.js 15, React 19, TypeScript, Convex, Tailwind, Razorpay, Resend, Arcjet, Sentry, PostHog, Zod, Vitest, Playwright, Netlify

- Built a full-stack SaaS with an embeddable widget that monitors third-party outages (Stripe, Slack, HubSpot)— Next.js 15, React 19, TypeScript, and a Convex real-time backend with cron jobs scraping status every minute.
- Integrated Razorpay subscription billing with HMAC-verified webhooks, Resend magic-link auth/alerts, Arcjet rate limiting, Sentry, and PostHog analytics.
- Hardened with CSP/HSTS headers and SSRF guards; wired Vitest, Playwright, Biome, and typecheck into one validation pipeline.

### WaitlistWizard— Waitlist & Referral Engine SaaS

[GitHub ↗](#)

Tech: Node.js, Express, JWT, libSQL/SQLite, Zod, Helmet, CORS, express-rate-limit, sanitize-html

- Engineered a pre-launch waitlist & referral platform with a Node.js/Express REST API, JWT auth, and libSQL/SQLite— landing-page builder, signup capture, referral tracking, analytics, and dashboard.
- Implemented layered security: Helmet, CORS, express-rate-limit, sanitize-html (XSS prevention), and Zod request validation.

### find-oss— Open-Source Discovery CLI & Web Tool

Tech: Python, Click, Flask, GitHub API, Manim, pytest (packaged with pyproject + console entry points)

- Designed a Click CLI + Flask web tool that ranks the safest, most lightweight open-source GitHub repos for any category via the GitHub API and a custom scoring model, exporting Markdown reports.
- Added a story-to-video feature that auto-generates narrated MP4 explainers using Manim and offline TTS— fully local, no GPU or cloud cost.

### toonforge— Automated Cartoon-Generation Pipeline

Tech: Python, Gemini API, ffmpeg, pytest

- Architected a multi-stage cartoon pipeline (storyboard→ keyframes→ motion→ voices→assembled episode) orchestrating local compute, free cloud GPUs (Kaggle/Colab), and ffmpeg.
- Built the working Story Brain stage that turns a one-line idea into a structured storyboard via the Gemini API; packaged and pytest-tested.

## • ADDITIONAL BUILDS

- 7 Claude Code developer-tooling plugins (model routing, memory toolkit, auto-dispatch) using custom hooks & skills
- Python content-automation pipelines (YouTube/Instagram) with OAuth, Google Drive API, and n8n
- AI hand-gesture control app (OpenCV/MediaPipe)

## • EDUCATION

### B.E., Computer Science & Engineering

Expected 2028

Sir M. Visvesvaraya Institute of Technology (Sir MVIT), Bangalore, India

CGPA: 8.2 / 10 (Year 1) · Relevant coursework: Data Structures & Algorithms, OOPs
